

SACHIN KUMAR

Data Analyst | Power BI Developer | SQL & AI Enthusiast

+91-7988109161 | kumarsachin72308@gmail.com | Rewari, Haryana

Portfolio: [Sachin Kumar](#) | [Data Analyst Portfolio](#) | GitHub: [sachiuhhigt](#)

PROFILE SUMMARY

Data Analyst with hands-on project experience turning raw datasets into decision-ready insights using SQL, Power BI, and Python. Skilled at building automated ETL pipelines, interactive dashboards, and AI-assisted analytics workflows (LLM-based querying, sentiment analysis). Strong foundation in relational database design and data modeling, with a track record of shipping end-to-end analytics projects independently.

TECHNICAL EXPERTISE

- Core Competencies: Data Cleaning, Dashboard Development, KPI Reporting, ETL, Data Modeling, Business Intelligence, Process Automation
- Visualization & Reporting: Power BI, DAX, Advanced Excel (Power Query, Pivot Tables, XLOOKUP, Macros)
- Databases & Query Languages: SQL (MySQL) — complex joins, window functions, query optimization
- Programming & Scripting: Python (Pandas, NumPy, OpenPyXL, Tkinter, Matplotlib)
- AI & Automation: n8n, PandasAI, Hugging Face, Ollama, LLM APIs for natural-language querying
- Tools & Platforms: Git, GitHub, Visual Studio Code (VS Code), Jupyter Notebook, MySQL Workbench

KEY PROJECTS

Full-Stack ERP Management Database System | Python (Tkinter), MySQL

- Built a modular desktop application automating daily operations across students, employees, and inventory records, replacing manual spreadsheet tracking for 3 business functions in one system.
- Designed a normalized MySQL backend supporting real-time CRUD transactions, cutting record-lookup and update time from minutes to seconds while maintaining data integrity across modules.

Global Sales & Finance Performance Dashboards | Power BI, DAX

- Built dynamic Power BI dashboards with 15+ advanced DAX measures tracking global sales KPIs, regional growth, and operating expenses across multiple markets.
- Surfaced pricing and margin insights that informed stakeholder decisions on regional pricing strategy, improving visibility into profit margins across product lines.

E-Commerce Database Analytics | MySQL

- Wrote complex SQL queries (multi-table joins, window functions) against an active e-commerce database to extract product performance and customer behavior metrics.
- Delivered structured reporting that identified top-performing retail segments and revenue bottlenecks, guiding inventory and merchandising priorities.

Automated E-Commerce Data Pipeline & AI Sentiment Tracker | Python, n8n, MySQL

- Architected a zero-touch pipeline (n8n + Python) to extract, clean, and load raw e-commerce data into MySQL on a scheduled basis, eliminating manual data handling.
- Integrated open-source NLP models to run sentiment analysis on customer reviews, producing actionable sentiment scores to flag negative-feedback trends early.

AI-Powered "Text-to-SQL" Business Assistant | Python, MySQL, LLM APIs

- Built a Python tool using LLM APIs to translate natural-language business questions into optimized MySQL queries, tested against 20+ sample business questions.
- Enabled non-technical stakeholders to self-serve data queries without SQL knowledge, reducing dependency on analyst-run ad hoc reports.

EDUCATION & CERTIFICATIONS

BCA (Pursuing) — Indira Gandhi National Open University (IGNOU) 2026 – Present

Professional Data Analyst Training Program — ZillionSofttech IT Training Institute, Rewari Sep 2025 – Feb 2026

SQL (Basic) Certification — HackerRank Completed

SQL (Advanced) Certification — HackerRank Completed

12th (PCM with IT/ITeS) — Govt. Sr. Sec. School, Jharoda, HBSE 2023
